

GRIP Recruitment Software

powering placements

2LS
RECRUITMENT
SOFTWARE SPECIALISTS

Recruitment consultancies operate in a highly-competitive and fast-moving market. Quick and accurate matching and tracking of vacancies and candidates is vital.

GRIP will give you competitive advantage

GRIP has been developed by recruitment specialists 2LS to meet the exacting demands of a recruitment consultancy. It manages and underpins all aspects of the placement process covering clients, candidates and vacancies, and enables your staff to collaborate and match the right candidate to the right job, quickly.

But it goes much further than this. Unlike many other systems on the market, GRIP enables you to drag-and-drop across multiple windows, so you can search and update information quickly and effectively. And it integrates seamlessly with Microsoft Outlook and other Office systems, improving productivity and speeding up communications.

As a result, you can react more quickly to new vacancies and candidates.

GRIP's advantages include:

- Get started quickly: our intuitive interface works in the same way across all elements of GRIP. It only takes around 10 minutes for even non-technical staff to use the system productively.
- Bespoke system: designed to meet your exact needs, GRIP will underpin and enhance your current way of working.
- Powerful searching and matching: through multiple windows, extensive use of drag-and-drop and a highly-sophisticated skills matrix, information can be viewed and transferred across different areas.
- Enhanced workflow: designed specifically for the recruitment industry, GRIP follows your typical workflow logically and supports you through the entire placement process.
- Effective reporting: with extensive querying and reporting facilities to provide the very best management information.

key features

- Tight integration with Microsoft Office and Outlook.
- Drag-and-drop between multiple open windows.
- Highly customisable.
- CV parsing and data extraction.
- Automatic activity tracking.
