

GRIP Recruitment Software

SeeVee CV Search Module

2LS
RECRUITMENT
SOFTWARE SPECIALISTS

key features

- Fast CV searching
- Fully boolean keywords
- Search CVs on GRIP and held externally
- Quickly create a shortlist

SeeVee provides a structured CV search and being fully Boolean allows for more complex and fully detailed searches to be made.

SeeVee will help you find candidates faster

The use of the SeeVee enhances GRIP by giving the consultant a more rapid method of detecting a candidate's skills and abilities and also to a more sophisticated level.

Consultants therefore spend less time on a relatively long process of interrogation of data and are able to use the saved time more effectively.

SeeVee's advantages include:

- **Rapid search:** Detailed searches are found instantaneously
- **Fully Boolean:** Allows structured complex searches to be made with very little initial training by consultants.
- **Cost effective:** Saves time and money by reducing the amount of time spent on searches by consultants.
- **Accurate Information:** Consultants are able respond to clients' requests for detailed CV information within a rapid turn around time.
- **Views CVs not currently in use:** The consultant is able to call up details of applicants from a "sleeping" database to meet any client request for specific information.

technical requirements
